

3 November 1966

MEMORANDUM FOR: Director of National Estimates

ATTENTION :  25X1A

SUBJECT : Submission of Tables by the NIPP Ad Hoc Naval
Working Group for Section III of NIPP-67

1. Submitted herewith are NIPP Tables IIID 1 and 2, IIID 5 and 6, IIID 12 and 14, and IIID 21. As noted for Section I, the arbitrary division of ships into first and second line categories has been dropped. For surface ships a reserve category has been added that is used when there is firm evidence that a ship has undergone some form of preservation, remained inactive/unmanned for an extensive period of time, or has been berthed in an "inactive" harbor, port or backwater area.

2. Your attention is called to a change in the NSA position on a reservation to the submarine tables in NIPP-67. Although still differing with the estimates presented in NIPP-67, NSA prefers not to show a reservation because of the classification under which these tables are published.

25X1A

Chairman,
Naval Working Group

Enclosure:
As Stated

SECRET

NIPF-67

- 1/ The previous distinction between Soviet first and second line submarines has been dropped. The overall reduction in diesel powered attack submarines in the later years of this table reflects an attrition resulting from transfers and retirements.
- 2/ See Table IC 2 for the derivation of the number of nuclear submarines in operational units.
- 3/ M-class submarines are being dropped due to a lack of sightings of operational units.

1/ The previous distinction between Soviet First and Second Line Ships has been dropped. This table shows the total number of ships that are estimated to be operational in any given year. A ship is carried in the reserve category when there is firm evidence of the following:

- It has been cocooned; fitted with dehumidification gear, or undergone other terms of preservation.
- It has been inactive/unmanned for an extensive period of time, or has been berthed in an "inactive" harbor, port or backwater area.

A ship in reserve does not include one that is in for overhaul or modernization.

2/ Includes one Sverdlov-Class cruiser fitted with SAM armament.

3/ It is assumed for the purpose of this estimate that the new probable DLG is a SAM equipped unit.

4/ Includes units assigned to the KGB.

<u>All Coastal Defense Forces</u>															
Total Number of Battalions	25-50	25-50	25-50	26-51	27-52	24-45	22-38	20-32	16-25	11-15	11-15	11-15	11-15	11-15	11-15

1/ The current estimate of the SSC-2b (SAMLET) force is based on the number of sites so far detected plus an allowance for sites not yet detected but which are believed to be necessary for balanced defense. We believe SSC-1b cruise missiles are now being deployed with the coastal defense forces and will replace the SSC-2b (SAMLET) system by 1971. These missiles are believed to be deployed near major ports and potential landing beaches in all fleet areas.

2/ 4 missiles per launcher, 2 launchers per battalion. Numbers of launchers and missile inventory is given in Table IIID 8.

3/ 1 missile per launcher, 4 launchers per battalion. Numbers of launchers and missile inventory is given in Table IIID 8.

- 1/ The number of missiles in column A equals one shipfill for each guided missile surface ship. The number in column B, 75 percent of column A, represents missiles held for repair, maintenance, and replenishment for additional missions.
- 2/ The number of missiles in column A equals one shipfill for each guided missile submarine. The number in column B, 100 percent of column A, represents missiles held for repair, maintenance, and replenishment for additional missions.
- 3/ The number in column A equals the number of SSC-2b missile launchers and also equals one missile per launcher. There are two launchers per battalion. The number of missiles for maintenance, repair, and replenishment (column B) is six per battalion.
- 4/ The number of column A equals the number of SSC-1b missile launchers and also equals one missile per launcher. There are four launchers per battalion. The number in column B, 50 percent of column A, or two missiles per battalion, represents missiles held for repair, maintenance, and replenishment.

NIPP-67
TABLE IIID 21

ESTIMATED MAXIMUM SOVIET PORT-TO-PORT
SEALIFT CAPABILITY 1/

(Number of Ground Force Divisions at Full Strength)

<u>Fleet Area</u>	<u>Mid-1967</u>		<u>Mid-1972</u>		<u>Mid-1976</u>	
	<u>Motorized Rifle Divisions</u>	<u>or</u> <u>Tank Divisions</u>	<u>Motorized Rifle Divisions</u>	<u>or</u> <u>Tank Divisions</u>	<u>Motorized Rifle Divisions</u>	<u>or</u> <u>Tank Divisions</u>
Northern	3.0	2.5	4.7	4.0	6.0	5.0
Baltic	5.3	4.5	9.0	7.5	12.0	10.0
Black	8.0	6.5	15.0	12.5	20.0	17.5
Pacific	6.0	5.0	10.0	8.0	12.5	10.5

1/ The above calculations are based on 70% availability of the total estimated Soviet dry cargo fleet (less refrigerator ships) for each period and fleet area without reference to heavy lift capability. However, it is estimated that the Soviet merchant fleet in mid-1967 will include about 250 ships with heavy lift capabilities ranging from 50 to 60 tons. While it is expected that the number of ships with heavy lift capabilities will increase to a considerable extent by mid-1976, it is not possible at this time to estimate the number of units in this category beyond 1967.
